

PRESS RELEASE**For Immediate Release****YORKLAND CONTROLS RENEWS AUTHORIZED BUILDING CONTROLS SPECIALIST (ABCS) AGREEMENT WITH JOHNSON CONTROLS****ACCESS TO NEW FACILITY EXPLORER INTEGRATION SYSTEM EXPANDS YORKLAND'S CURRENT JOHNSON CONTROLS METASYS OFFERING**

TORONTO, Ontario (November , 2005) – Yorkland Controls Ltd which distributes climate control products ,systems and services, announced a new agreement with Johnson Controls Inc., which will provide access to the Facility Explorer system, adding more capability for control integration than ever before. Facility Explorer provides industry leading Web accessibility beyond just the supervisory level allowing users to see and act on vital systems from individual field controllers or access across the entire IT network.

In the past, retail locations, office buildings, schools, and other facilities were limited in how they could operate and optimize their facilities. Power, heating, air conditioning, lighting, fire and security systems came in proprietary packages, which restricted how and from where they could be controlled. It also limited how data from those systems could be accessed and transformed into meaningful information.

Facility Explorer has the capability to integrate with protocols such as BACnet, LonTalk and Metasys N2 without the use of external gateways or translators “Using the Facility Explorer integration appliance allows Yorkland to build on our experience of integrating other non-HVAC protocols such as Modbus and link them to the management information systems integral to every enterprise.”, stated Gerry Cellucci of Yorkland Control Ltd.

“We are pleased to have renewed our relationship with Johnson Controls,” stated Gavin Barrett, of Yorkland Controls Ltd. “ This will allow our customers to monitor and manage climate control systems and energy in all of their buildings without the need for proprietary workstations and software, resulting in significant savings

“As a Johnson ABCS with Facility Explorer system access, Yorkland can provide customers with access to new open systems, while protecting their investment in legacy climate control infrastructure,” notes Brian Hawthorne, Director of Johnson Controls Product Sales - Americas of Johnson Controls. “Distributed through qualified contractors and supported by Yorkland, high quality and feature rich products such as the Facility Explorer system can now be exposed to medium to low end building control markets – cost competitively.”
