

POSITION: Building Automation – Automation Specialist- LOCATION British Columbia

General Position Summary:

In this position you will be challenged to have an advanced understanding of the Building Automation Systems (BAS) Industry. As Automation Specialist, new hires will be required to learn a vast array of products, applications and software. The position requires a technically competent individual to support the solutions recommended by our sales force, as well as existing systems owned by external customers. These systems include but not limited to:

- Building Automation Systems
- HVAC Application's
- DDC and Electronic Controls
- IOT and Networking

Primary Roles & Responsibilities:

- Maintain Expert level of product and application knowledge.
- Accelerate personal and team growth by attending relevant technical training for the purpose of cross training, application creation, and application support.
- Perform technical product training for sales, estimators, and engineers at targeted accounts.
- Articulate both technology and product position to both businesses and technical users
- Perform technical product training for sales, estimators, and engineers at targeted accounts.
- Assist in the design and development of new products and tools necessary to make target accounts / clients comfortable and successful at selling new technology
- Assist sales in technology / product demonstrations to understand customer requirements and to demonstrate the solution to their needs.
- Support new and existing customers on projects, including programming, database, graphics, start-up and field commissioning
- Create & download programs, address controllers and commission field controller's, applications and networks
- Perform field commissioning for products and systems we supplied.
- Execute projects directly assigned as lead in a timely manor
- Work with and coordinate tasks with electrical sub trades and mechanical contractors
- Perform end user training as required to complete projects directly assigned

1. Other duties and Responsibilities

- Provide local technical support
- Set up for all internal/external customer training sessions hosted by Yorkland
- Participate in Training initiatives
- Adhere to all company policies

2. Minimum requirements

- Demonstrated knowledge of HVAC control systems.

- Familiarity with Microsoft Software (including Visio, Excel, Outlook, etc.).
- Strong verbal and written communication skills.
- Ability to interface effectively with clients and contractors
- Ability to multi-task between Field work and other duties and responsibilities
- Ability to work effectively in a team-based environment with minimal supervision
- Drivers license and transportation required for travel within the province

The above is intended to describe general nature and work level being performed. This should not be construed as the complete list of duties assigned to the position.
