

Are your plug loads staying up all night?

Why keep plug loads operating around the clock when there's no one there to use them? Isolé ends this waste by combining occupancy based control with vital surge protection.

sensor lens

Essential machines (hard drives, faxes) use uncontrolled outlets to remain operating continuously.

Our passive infrared occupancy sensor knows when you're not in your office and turns off unneeded equipment.

Isolé arms your workspace against threats like power surges, lightning strikes, and voltage spikes.

Nonessential equipment (monitors, task lighting, printers) uses controlled outlets that respond to the occupancy signals.

Give your plug loads a rest — and save some energy while you're at it.
